PART OF SOUTHERN CALIFORNIA SHOWING AREA DESCRIBED IN THIS  
AND PREVIOUS BULLETINS OF THE NO. 91 SERIES

## ABSTRACT

This bulletin is one of a series on water wells and springs in southern California desert areas. The series is prepared by the U.S. Geological Survey and published by the California Department of Water Resources.

Each bulletin shows location of water wells and springs in a part of the southern California desert regions; describes well depth and yield, water use and level on dates observed; names the well owner; provides pumping data, including depths, rates, static water levels, drawdowns, and specific capacities; and lithologic data from drillers' well logs.

Earlier bulletins in the series are:

Mr. John R. Teerink, Director  
Department of Water Resources  
State of California--Resources Agency  
Post Office Box 388  
Sacramento, California 95802

Dear Mr. Teerink:

We are pleased to enclose, for publication by the Department of Water Resources, the U.S. Geological Survey report on "Water Wells and Springs in the Eastern Part of the Upper Santa Margarita River Watershed, Riverside and San Diego Counties, California," by F. W. Giessner and Mary J. Mermod.

This report--one of a series of data reports for southern California--was prepared by our Garden Grove subdistrict office in accordance with the cooperative agreement between the Riverside County Flood Control and Water Conservation District and the U.S. Geological Survey. It tabulates all available data for wells in the indicated area and contains maps showing the location of wells and springs and the reconnaissance geology with special reference to the water-yielding deposits.

Very truly yours,

Lee R. Peterson  
District Chief

## FOREWORD

### Previous Investigations and Acknowledgments

Data on ground water in the eastern part of the upper Santa Margarita River watershed are contained in U.S. Geological Survey Water-Supply Paper 429; State of California, Department of Water Resources Bulletins 130-65 and 106-2; and State of California Department of Public Works, Division of Water Resources Bulletin 57.

The geology was compiled and modified by F. W. Giessner from published maps by Mann (1955) and Weber (1963) and from unpublished maps by Fred Kunkel (Kunkel and others, 1961).

The Riverside County Flood Control and Water Conservation District provided access to all pertinent information in its files. The cooperation and assistance of those who contributed materially to the completeness of the data in this report are gratefully acknowledged.

### Purpose and Scope of the Investigation

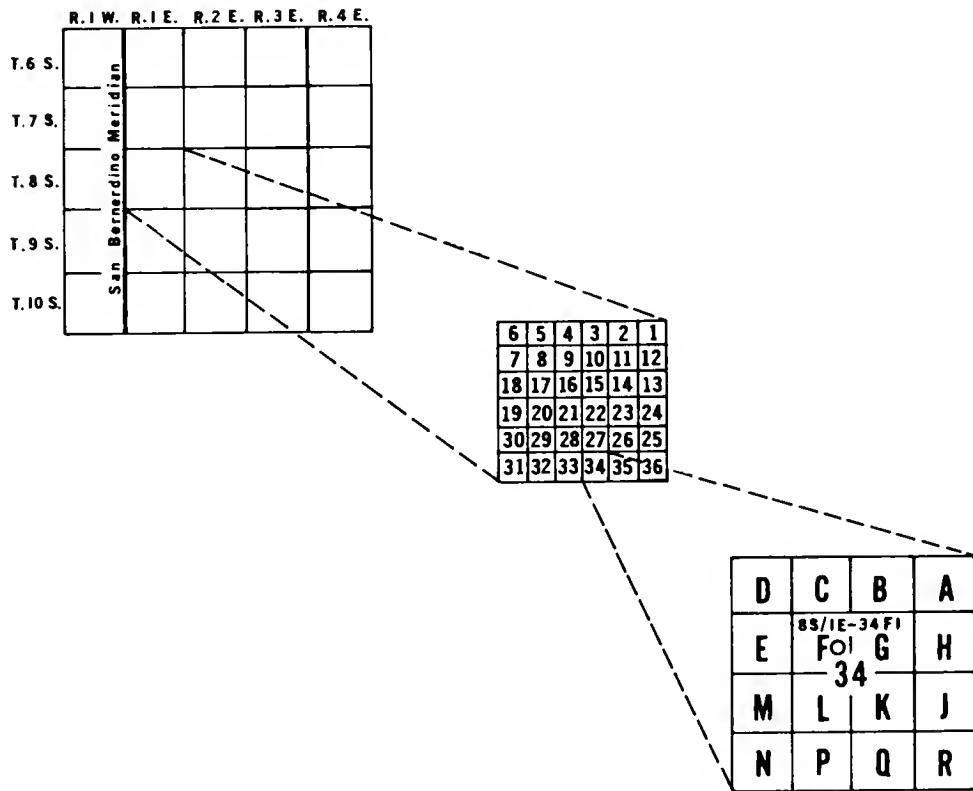

The data in this bulletin were collected by the U.S. Geological Survey, in cooperation with the Riverside County Flood Control and Water Conservation District, as a phase of the investigation of water wells and springs and general hydrologic conditions throughout much of southern California.

The general objective of the investigation is to collect and tabulate all available ground-water data for the individual basins to provide public agencies and the general public with data for an overall ground-water investigation of the area and for planning water utilization and developmental work.

The scope of the work includes (1) brief reconnaissance of major geologic features to determine the extent and general character of the deposits that contain ground water; (2) field examination of most water wells and springs in the area to determine their location with respect to the geographic and cultural features and the public-land net and to record well depths and sizes, types and capacities of pumping equipment, uses of the water, and other pertinent information available at the well site; (3) measurement of the depth to water below land surface; and (4) collection and tabulation of well records, including water-level measurements, chemical analyses, and pumping-test data.

### Well-Numbering System

Wells are numbered according to their location in the rectangular system for the subdivision of public land. For example, in the number 8S/1E-34F1, the part of the number preceding the slash indicates the township (T. 8 S.), the part between the slash and the hyphen indicates the range (R. 1 E.), the number between the hyphen and the letter indicates the section (sec. 34), and the letter indicates the 40-acre subdivision of the section. Within the 40-acre tract wells are numbered serially, as indicated by the final digit. Thus, well 8S/1E-34F1 is the first well to be listed in the SE $\frac{1}{4}$ NW $\frac{1}{4}$  sec. 34, T. 8 S., R. 1 E., San Bernardino base line and meridian as shown in the diagram below:

There are a few exceptions to this system of numbering wells according to their position in the 40-acre subdivision of the section. These are wells which were assigned numbers based on earlier, less accurate maps. During this investigation these wells have been plotted at the correct location on the map, but the old number has been retained to facilitate use of the older records for the well.

## GENERAL FEATURES

The eastern part of the upper Santa Margarita River watershed area covers about 250 square miles in the southwestern part of Riverside County and about 85 square miles in the northwestern part of San Diego County. The total watershed area is about 335 square miles. The area is approximately between long  $116^{\circ}35'$  and  $116^{\circ}55'$  W., and lat  $33^{\circ}20'$  and  $33^{\circ}35'$  N.

The area includes all or parts of the following valleys: Aguanga, Anza, Burnt, Butterfield, Cahuilla, Chihuahua, Dameron, Dodge, Durasna, Lancaster, Lewis, Oak Grove, Radec, Reed, Terwilliger, Tule, Weber, and Wilson. The principal towns are Aguanga, Anza, Oak Grove, Radec, Sage, and Sunshine Summit. Access to the area is by California Highways 71, 74, and 79 and by Riverside County road R3.

The area described is shown on all or parts of the following topographic quadrangle maps: Hemet, Idyllwild, and Warner Springs at a scale of 1:62,500 and Aguanga, Boucher Hill, Palomar Observatory, and Vail Lake at a scale of 1:24,000.

## GEOLOGIC AND HYDROLOGIC FEATURES

The geologic units of the eastern part of the upper Santa Margarita River watershed are divided into two broad categories: consolidated rocks and unconsolidated deposits.

The consolidated rocks include the igneous and metamorphic rocks of pre-Tertiary age. These rocks form the basement complex that underlies the unconsolidated deposits.

The basement complex includes the Bedford Canyon Formation, the Lakeview Mountain Tonalite, the Aguanga Tonalite of Mann (1955), the San Marcos Gabbro, and the Woodson Mountain Granodiorite. The basement complex locally yields small quantities of water to wells from joints, fractures, and weathered zones.

The unconsolidated deposits consist of sedimentary material deposited during Quaternary time. These deposits have been subdivided into older alluvium of Pleistocene age and younger alluvium of Holocene age. Collectively, these deposits form the principal aquifers in the area.

The older alluvium consists of boulders, gravel, sand, silt, and clay. Included in the older alluvium are the Temecula Arkose, the Pauba Formation, and the Dripping Springs Formation, all of Mann (1955). The Temecula Arkose consists principally of white or buff sand and brown silt; calcareous concretions and lime-cemented beds are also common. The Pauba Formation consists of coarse, reddish, poorly consolidated fanglomerate with interbedded sand and silt. These formations, where saturated, yield water to wells. The Dripping Springs Formation consists of a thin veneer of alluvial fan material. This formation is not extensive, and it is not considered a source of ground water.

The younger alluvium consists of boulders, gravel, sand, silt, and clay. Where saturated, these deposits yield water freely to wells.

Recharge to the ground-water system occurs by infiltration of precipitation and infiltration of runoff during flooding. Ground-water movement after recharge is generally westward and eventually discharges into the Pacific Ocean. A complex system of northwest-trending faults locally impedes the movement of ground water.

TABLE 1.--Description of wells

[Boxhead explanations are abstracted and modified from U.S. Geological Survey "Instructions for Using the Punch-Card System for the Storage and Retrieval of Ground-Water Data"]

State number: The wells are identified according to their location in the rectangular system for the subdivision of public land. The identification consists of the township number, north or south; the range number, east or west; and the section number. The section is further subdivided into sixteen 40-acre tracts lettered consecutively (excepting I and O), beginning with A in the northeast corner of the section and progressing in a sinusoidal manner to R in the southeast corner. Wells within the 40-acre tract are numbered sequentially. The base line and meridian are indicated by the final letter, as follows: H, Humboldt; M, Mount Diablo; S, San Bernardino.

Owner or name: The apparent owner or user. In some cases, the local name of the well is given.

Inventory date: The year the well was field canvassed; other information given generally applies for this date.

Method drilled:

A Rotary	P Air percussion
B Bored or augered	R Reverse-rotary
C Cable-tool	T Trenching
D Dug	V Driven
H Hydraulic-rotary	W Drive-wash
J Jetted	Z Other.

Depth of well: Depth, in feet below land-surface datum, is defined as the bottom of the perforated or screened interval or the drilled depth.

Depth cased: Length of casing, in feet below land-surface datum, or to the top of the perforated or screened interval.

Well finish:

C Porous concrete	O Open end	W Walled or shored
F Gravel wall, perforated or slotted casing	P Perforated or slotted casing	X Open hole in aquifer (generally cased to aquifer)
C Gravel wall, commercial screen	S Screen	Z Other.
H Horizontal gallery or collector	T Sand point	

Diameter: Inside diameter of the well, in inches; nominal inside diameter, in inches, of the innermost casing at the surface for drilled cased wells.

Power:

1 Hand	3 Gasoline engine	4 Diesel engine	5 Electric motor	7 LP gas engine (propane or butene)

TABLE 4.--Pumping tests

Time: Time of measurement, in minutes, after pump was started.

Static water level: The depth to water, in feet below or above (+) land-surface datum, prior to start of test.

Pumping water level: The depth to water, in feet below or above (+) land-surface datum, at end of test.

Drawdown: The difference, in feet, between the static and pumping water levels.

Yield: The yield of the well, in gallons per minute, for drawdown indicated.

Specific capacity: Yield, in gallons per minute, divided by drawdown, in feet. The specific capacity is a measure of the physical condition of the well and the aquifer or aquifers which it penetrates. A well with a large specific capacity is capable of a greater yield than a well with a small specific capacity.

This section consists of explanatory information and 14 page-size maps that show reconnaissance geology and location of wells and springs in the eastern part of the upper Santa Margarita River area. The area covered by each individual map is shown below. One composite map, about 34 by 39 inches, is available on request, at the requester's expense, from the district chief, U.S. Geological Survey, Water Resources Division, 855 Oak Grove Avenue, Menlo Park, California 94025.

#### INDEX TO GEOLOGIC MAPPING

1. J.F. Mann, Jr. (1955)
2. F.H. Weber, Jr. (1963)
3. Fred Kunkel (unpublished 1961)

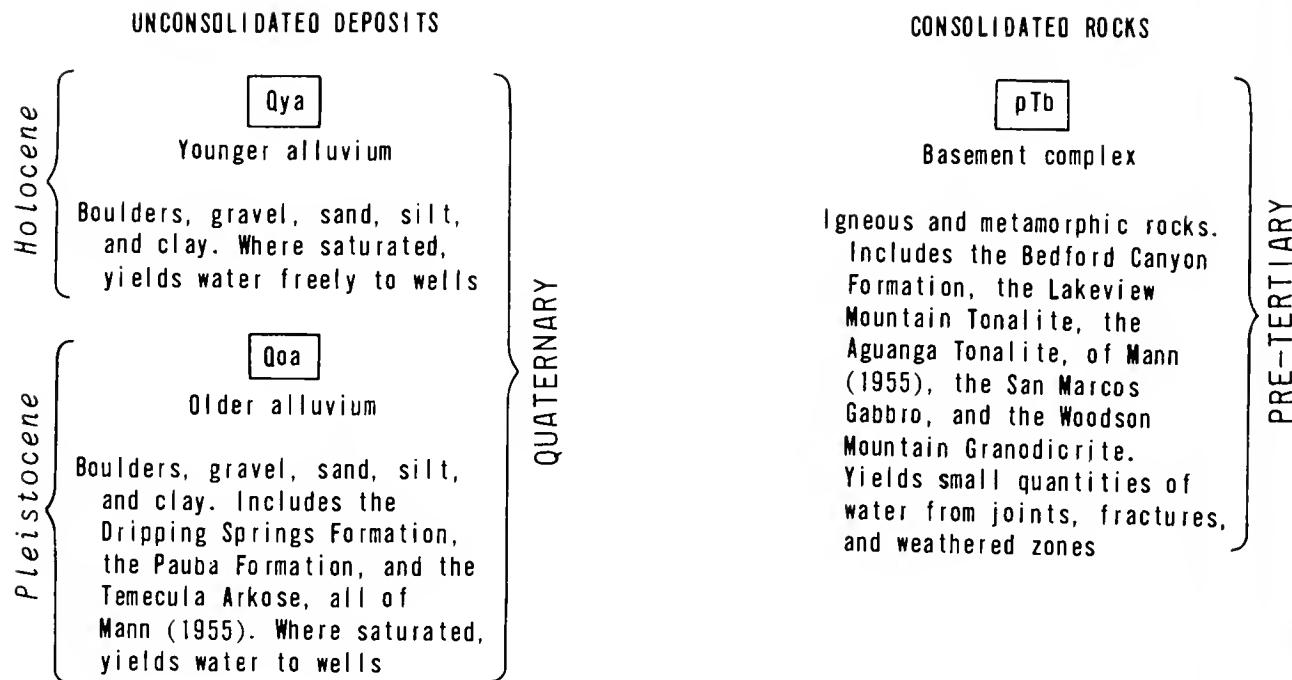

#### INDEX TO TOPOGRAPHIC QUADRANGLES

Location of wells and springs by F.W. Giessner, B.A. Winters, W.R. Moyle, Jr., J.H. Koehler, H.F. McCormack, H.L. McQueen, J.J. Janssen, E.J. Wiedmann, and E.J. Federaro. Geology compiled and modified by F.W. Giessner from published map by J.F. Mann, Jr., 1955, F.H. Weber, Jr., 1963, and unpublished map by Fred Kunkel, 1961

Base from U.S. Geological Survey topographic maps,  
scale 1:24,000 and 1:62,500

## EXPLANATION

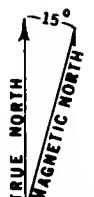

## MAP SYMBOLS

<hr/>	$\phi^{C1}$																
Approximate geologic contact	Dry, destroyed, or filled well																
<hr/> <hr/> • ? •																	
Fault	Flowing spring																
Dashed where inferred, dotted where concealed; queried where doubtful																	
<hr/> <hr/> • • •	Well-numbering system																
Surface-water divide	Letter after well indicates position in section thus:																
	<table border="1" style="margin-left: auto; margin-right: auto;"> <tr> <td>D</td><td>C</td><td>B</td><td>A</td></tr> <tr> <td>E</td><td>F</td><td>G</td><td>H</td></tr> <tr> <td>M</td><td>L</td><td>K</td><td>J</td></tr> <tr> <td>N</td><td>P</td><td>Q</td><td>R</td></tr> </table>	D	C	B	A	E	F	G	H	M	L	K	J	N	P	Q	R
D	C	B	A														
E	F	G	H														
M	L	K	J														
N	P	Q	R														
Well equipped with a 5-hp motor or larger																	
Unused well or well equipped with a motor smaller than 5-hp																	

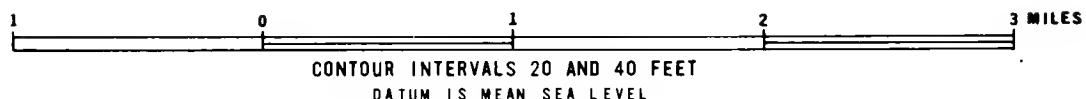

Letter after well indicates  
position in section thus:

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R
